#### EXPLANATIONS OF INTEREST TABLES.

THE principal or amount on which you want to count interest, will be found on the top of each page, with the word Dollars attached to it.

The figures 5, 6, 7, 8, 9 and 10 at the head of columns, are the different rates per cent.

The time for which you want to count interest will be found in the first column of each page, headed Time.

Above the double line, near the bottom of each page, is Simple interest; below the double line is Compound Interest.

To find the interest on 100 dollars, at ten per cent., for 2 years, 6 months and 18 days, turn to 100 dollars page, run down to 18 days, and across to 10 per cent. column, where you will find 50 cents, which is the interest for 18 days; go on down to 6 months, and across to 10 per cent. column, as before, and you will find the interest for 6 months is five dollars; go on down to 2 years, and across to 10 per cent. column, and you will find that the interest for 2 years is 20 dollars, making in all 25 dollars and 50 cents.

#### EXAMPLE FIRST.

Interest on 100 dollars for 2 years, 6 months and 18 days:

Interest for 18 days 50 
" " 6 mos. 5.00 
" " 2 yrs. 20.00

\$25.50, Interest on \$100 for 2 yrs. 6 mos. and 18 days.

To find the interest on 150 dollars for 2 years 6 mos. 18 days, get the interest on 100 dollars as in first example, then turn to page 50 dollars, and calculate same as in first example, and add together.

#### EXAMPLE SECOND.

Interest on 150 dollars for 2 years 6 months and 18 days:

Tret on	For	18 days	50
Int. on	66	6 mos.	5.00
\$100.	66	2 yrs.	20.00
Total and	٠،	18 days	25
Int. on	66	6 mos.	2.50
\$50	( "	2 yrs.	10.00
			_

\$38.25 Int. on \$150 for 2 yrs. 6 mos. 18 days.

To find the interest on \$150.50 for 2 years 6 months 18 days, get the interest on \$150, same as example second, then turn to page 50 dollars, and run down to 18 days, and across to 10 per cent. column, and you find 25 cents, which is  $\frac{25}{100}$  part of a cent interest, and of which you will keep no account; then run down to 6 months as before, and across to 10 per cent. column, you will find \$2.50, which in cents will be  $2\frac{50}{100}$  cents, which you will put down 3 cents, having a fraction to carry from 18 days; go on down to 2 years, opposite which you will find \$10, which in cents will be 10 cents; put said amount under three cents, which will make 13 cents, the interest on 50 cents for that time.

It is but  $12\frac{75}{100}$  cents, but as we don't count fractions, we will call it 13 cents.

#### EXAMPLE THIRD.

Interest on	\$150 for 2 yrs. 6 mos. 18 days, .	38.25
66	50 cents for 6 mos.,	03
66	50 cents for 2 years,	10

Interest on \$150 $\frac{50}{100}$  for 2 yrs. 6 mos. 18 days, \$38.38

The interest on dollars is shown in dollars and cents, and on cents in cents and in hundredths of a cent.

All other per cents are calculated same as 10 per cent.

Compound Interest is computed same as Simple Interest.

A Table Giving the Date a Note or Bill Matures when Given for a Stated Time.

The intention of this table is to show correctly the month and day of the month that promissory notes, bills, etc., mature, when drawn for any certain length of time, with or without the three days of grace.

Should you give a note for 100 days on the 25th day of August, and wish to know when it becomes due, turn to Time Table, run across top of table from left corner until you get to August, run down August column first line of figures until you get to 25th day; opposite 25th day, in same column, you will find 237, which amount put down, and add to it the 100 days, which will make 337; then look for the 337th number of the table, opposite which you will find the 3d day of December, the day your note or bill becomes due.

You can add 3 days grace to the 100 days if you wish; it will then come due on the 6th December.

This table is designed for ordinary years; therefore when you pass over February in leap year, your note falls due one day sooner.

Should your note fall due on Sunday, it must be presented and paid the day previous.

#### EXPLANATIONS OF TIME TABLE.

Should you want to find the number of days from October 20th to June 12th, turn to Time Table, and run your finger across the top until you come to October; run down the days of the month, which is the left hand row of figures, in October column until you get to 20; opposite 20, in same column, you will find 293, which number put down; then run across top to the right as before until you get to June; run down June column until you get to 12, opposite which you will find 528. Said number place above the figures 293, and subtract 293 from 528, which leaves 235 days.

Should you want to reduce that to months, divide by 30, which will make 7 months 25 days.

EXAMPLE.

528 293

30)235

7 mos. 25 days.

In counting interest on a note that is given a certain number of days from date, the actual number of days must be taken without regard to the month; but in counting interest by months, the number of months must be used.

In passing over February in leap year, add 1 day.
